Policy statement

Each landscape is a story. With room for discovery, surprise and inspiration. Through time, different protagonists and plot twists present themselves. You see the traces the past has left behind - subtle or impressive. And then there are the unwritten chapters: a future overflowing with opportunities for new, sustainable qualities. That is what we give shape to.

About the organization

BoschSlabbers has over 30 years of experience in the field of garden and landscape architecture. We work from three offices: The Hague, Bergen op Zoom and the Ede workshop. Around 35 enthusiastic landscape architects, urban planners, technicians and management specialists draw for the landscape of tomorrow. We work with enthusiastic professionals who have an eye for the location and character of the assignments. We help a wide range of clients find creative solutions to spatial issues. For the best results, we work together. With clients, but also with residents, users, authorities and partners. We are involved, happy to enter into dialogue, give insight into our considerations and choices, and share our vision and amazement.

Mission & Vision

As landscape architects, we seek the essence and wonder in every landscape. We cherish qualities, solve problems and, where possible, add contemporary qualities. We design the future with an eye for the present and a feeling for history, so that the landscape continues to tell a unique and fascinating story. We combine a down-to-earth, realistic view of issues with a refreshing and creative approach. We strive for simplicity, particularly in complex assignments. And always aim for a design that convinces for years to come. To achieve this, we rely on more than 30 years of experience.

In every task, we reflect ourselves through three core values, our 'trptych':

1. **System Thinking:** The natural system as a foundation and driving force

The landscape is a dynamic and resilient system that shapes and adapts itself. By intervening based on natural processes and strengthening ecosystems, we harness its transformative power and create sustainable landscapes.

2. **Intertwine:** Connecting people with their landscape

We weave the design firmly into its environment, offering experiences of seasons and blooming, thereby creating a healthy environment that we learn to understand and appreciate.

3. **Glocal:** Local contribution to global challenges

Local design interventions can contribute to global challenges such as climate adaptation and biodiversity. Each project is placed in a broader context and provides concrete solutions on both small and large scales.

Internal objectives

The people make BoschSlabbers! We place great value on a pleasant and inspiring work environment. A good working atmosphere is essential to us, which is why we regularly organize activities. In addition, we consciously reserve time in the planning for knowledge sharing and innovation. We are committed to an environmentally conscious way of working.

Quality

Quality of service is a matter of course for us; we always strive for the best and most beautiful result. And we like to keep ourselves sharp. In order to continue improving the quality of our processes and products, we work according to our quality management system, which offers us tools to make this further improvement possible. This management system has been set up and implemented in accordance with the requirements of ISO 9001. In this way, we focus on meeting the expectations of our customers and relevant stakeholders and the continuous improvement of the internal organisation. A combination of risk inventories, internal project evaluations, customer satisfaction analyses and internal audits contributes to

the identification of possible improvements within BoschSlabbers' processes. By analysing information and implementing improvements based on this information, we are a learning organisation where continuous improvement is key.

The scope of our quality management system has been determined as:

Providing design and consultancy services in the field of garden and landscape architecture in rural and urban environments.

The Hague, 13 februari 2025
